

CSCI-3133 C Programming

- Prof. K Abeysekera

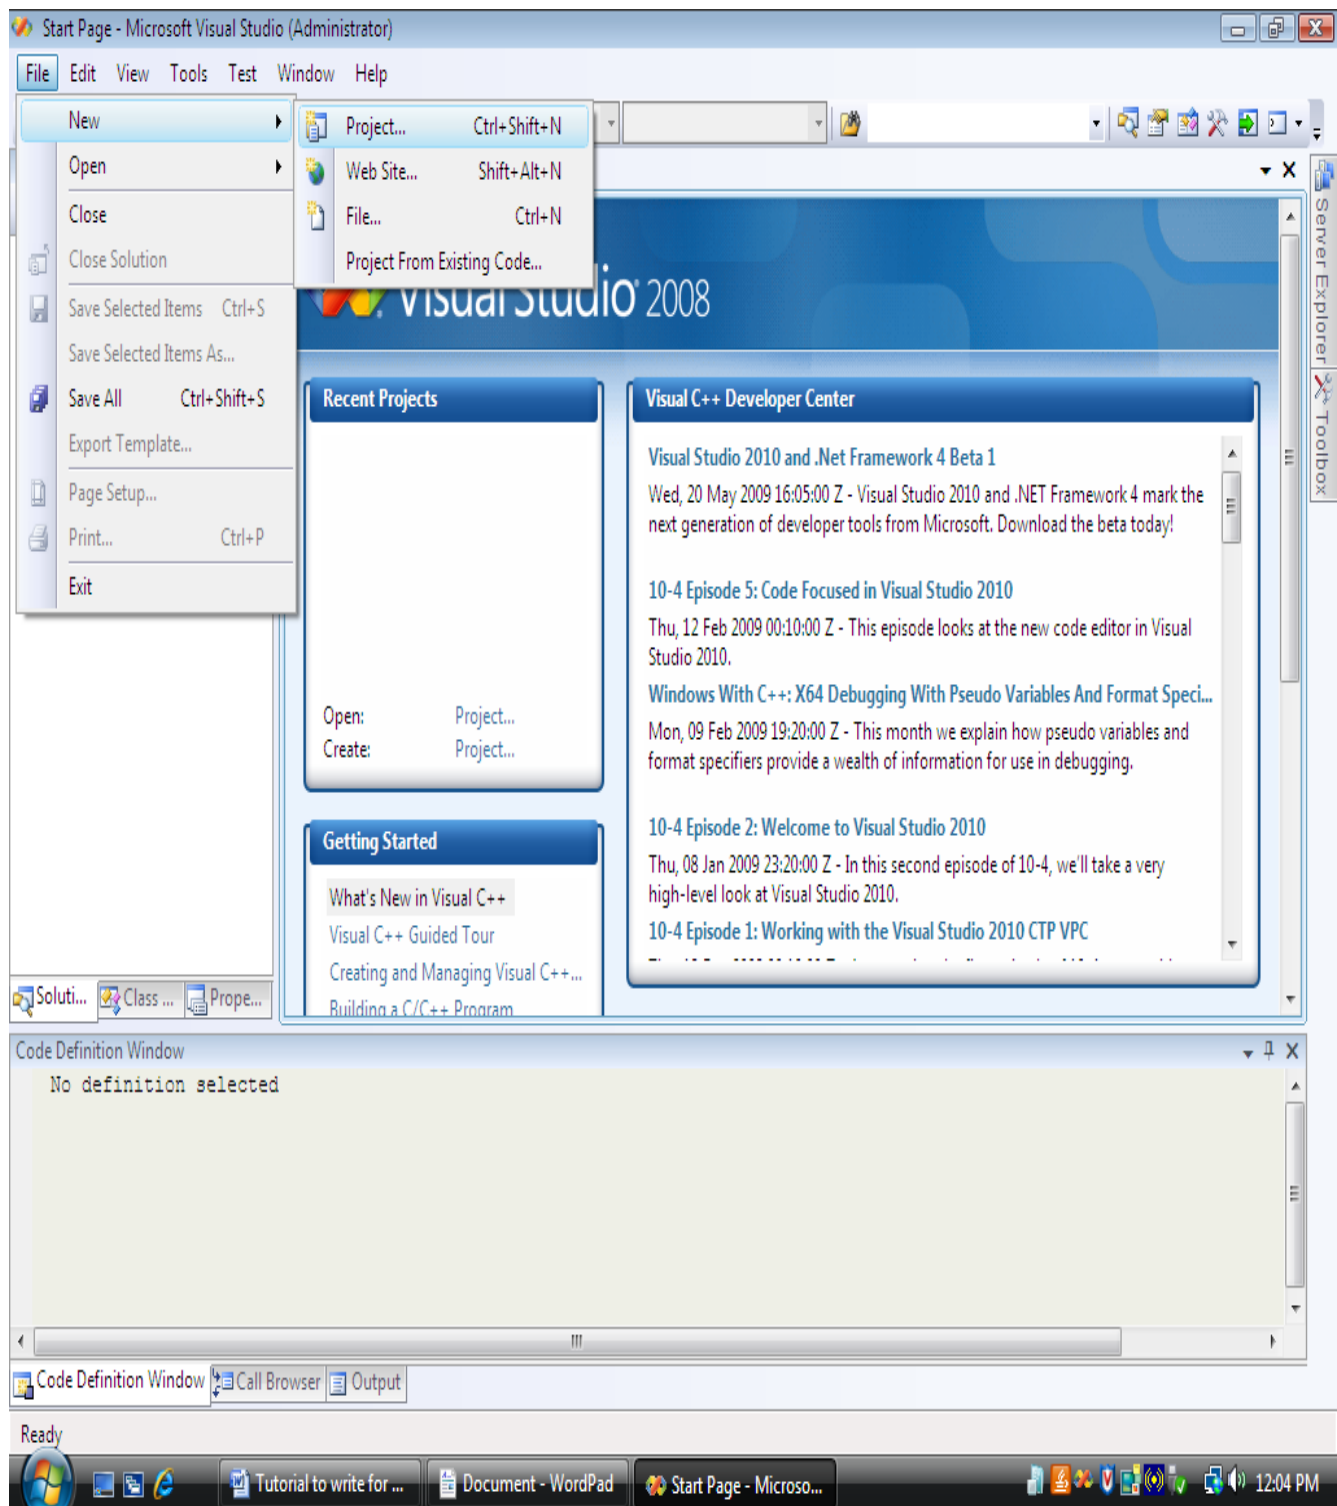

Tutorial on how to write, compile and run a C program in Visual Studio 2008.

1) Start-->Programs-->Microsoft Visual Studio 2008-->Visual Studio

2)

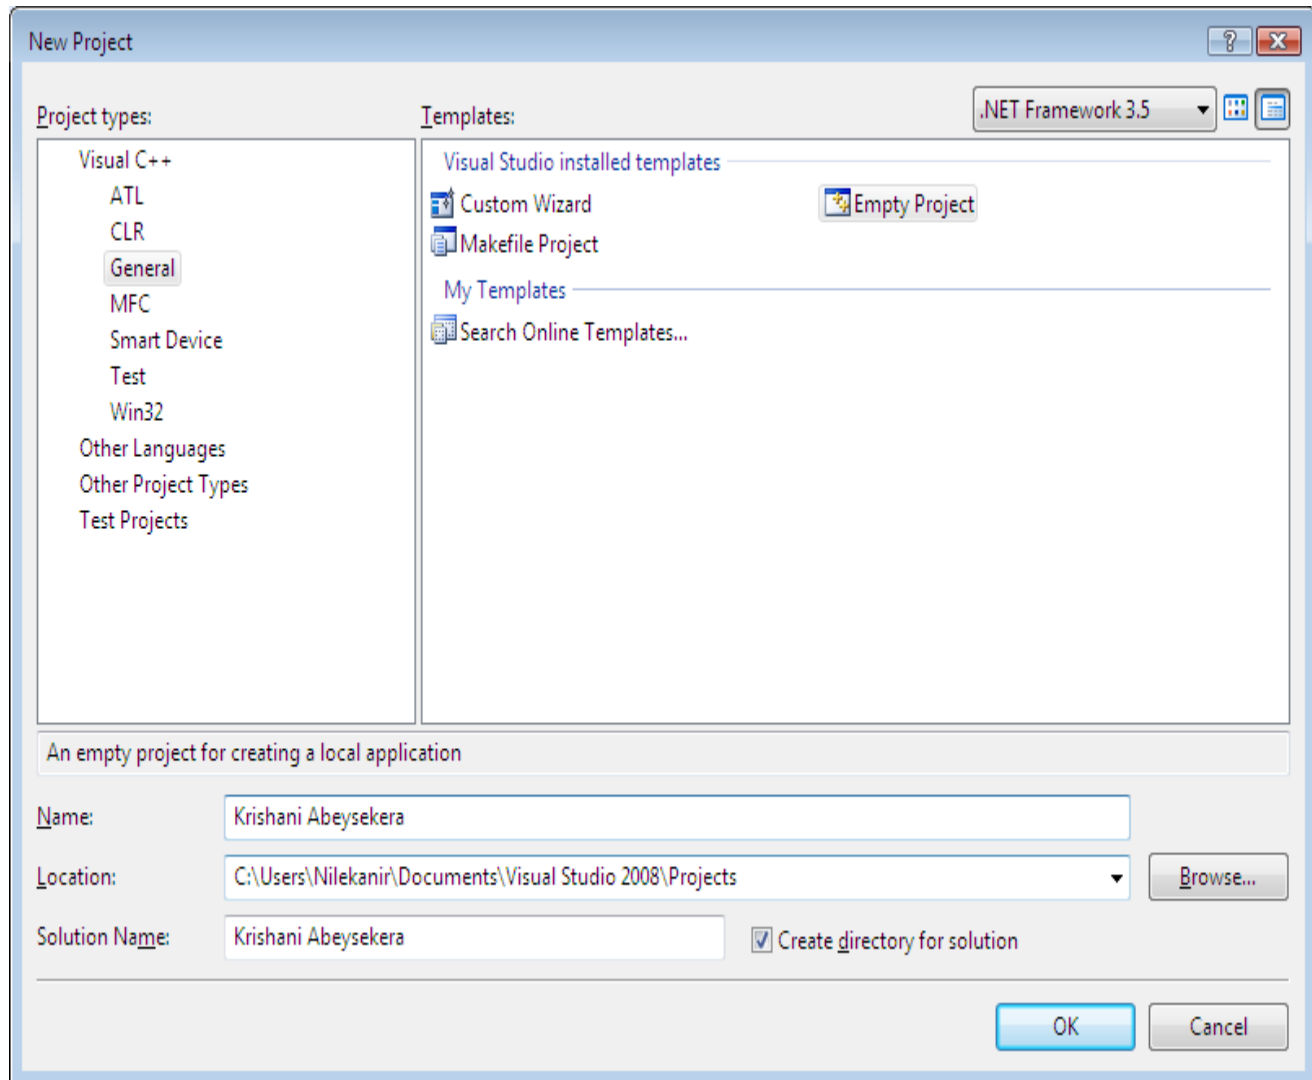

3) Click on **File--> New-->Project**

4) Project Type should be :

Visual C++ -> General -> Empty Project

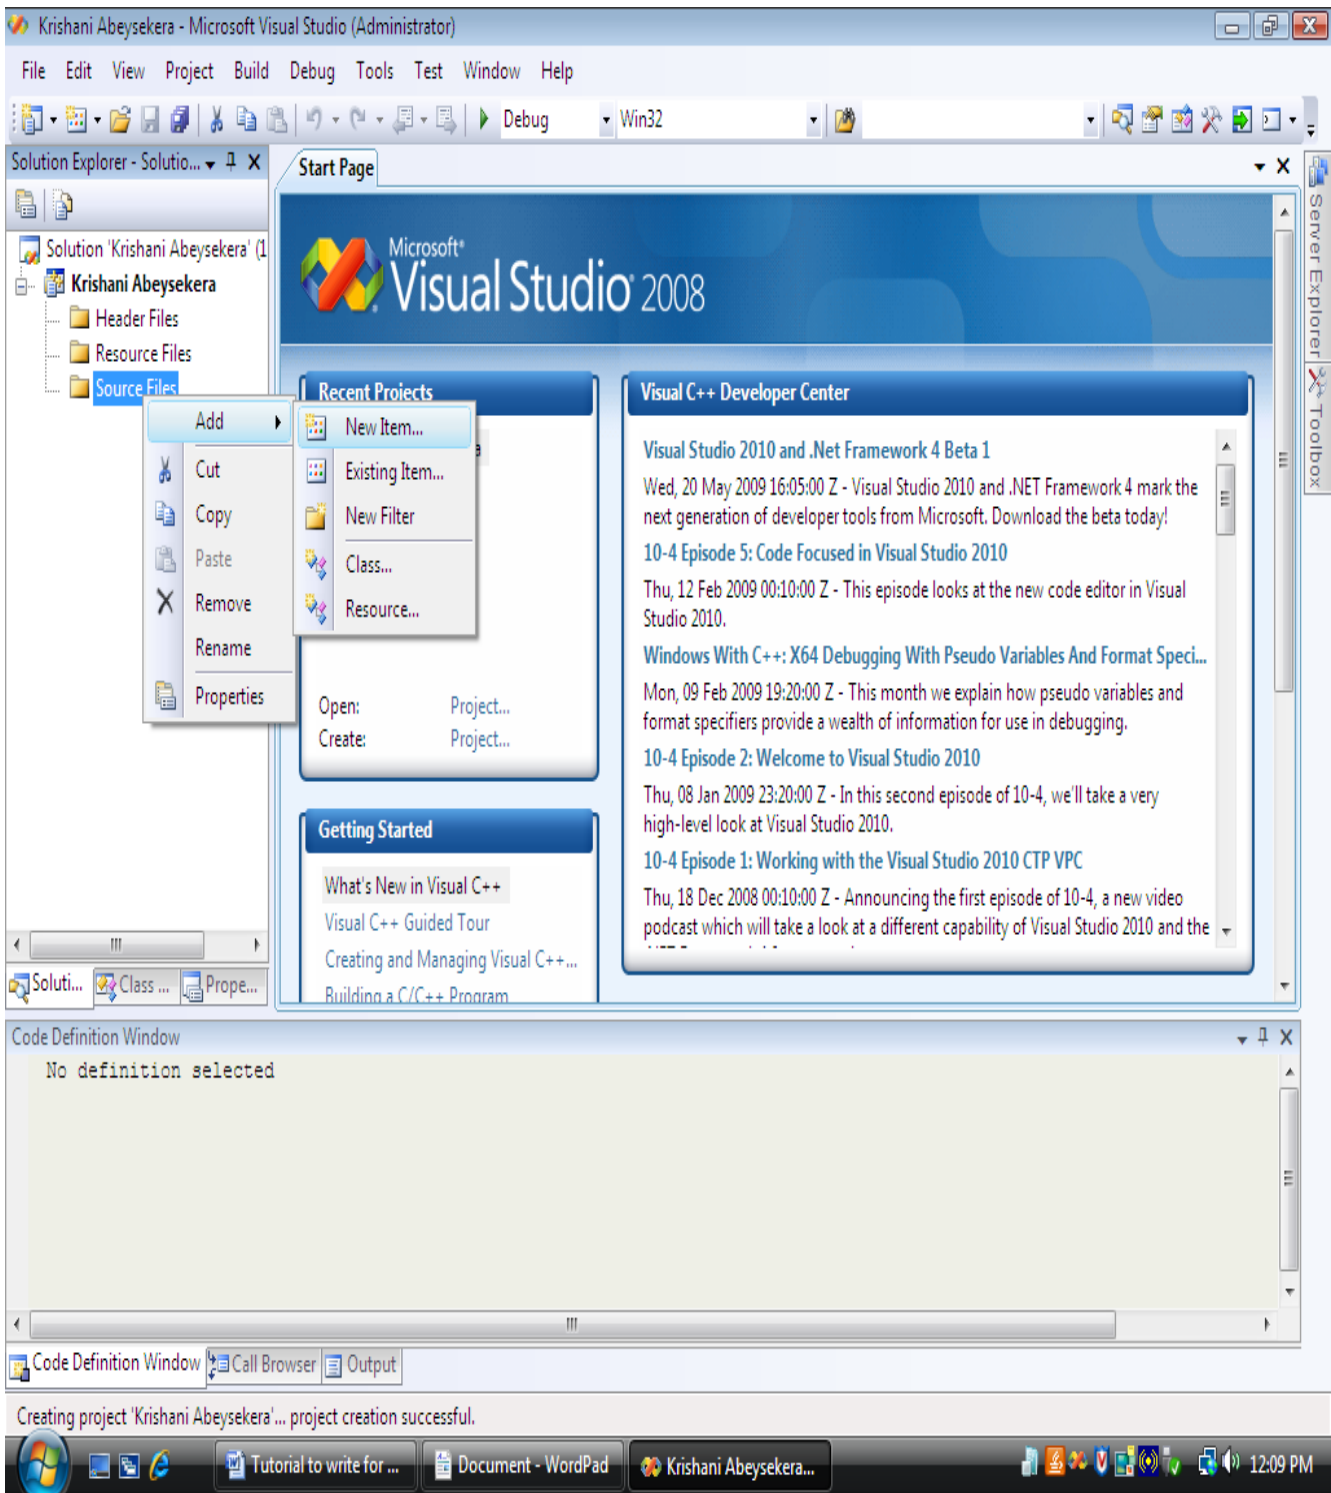

Enter location and name

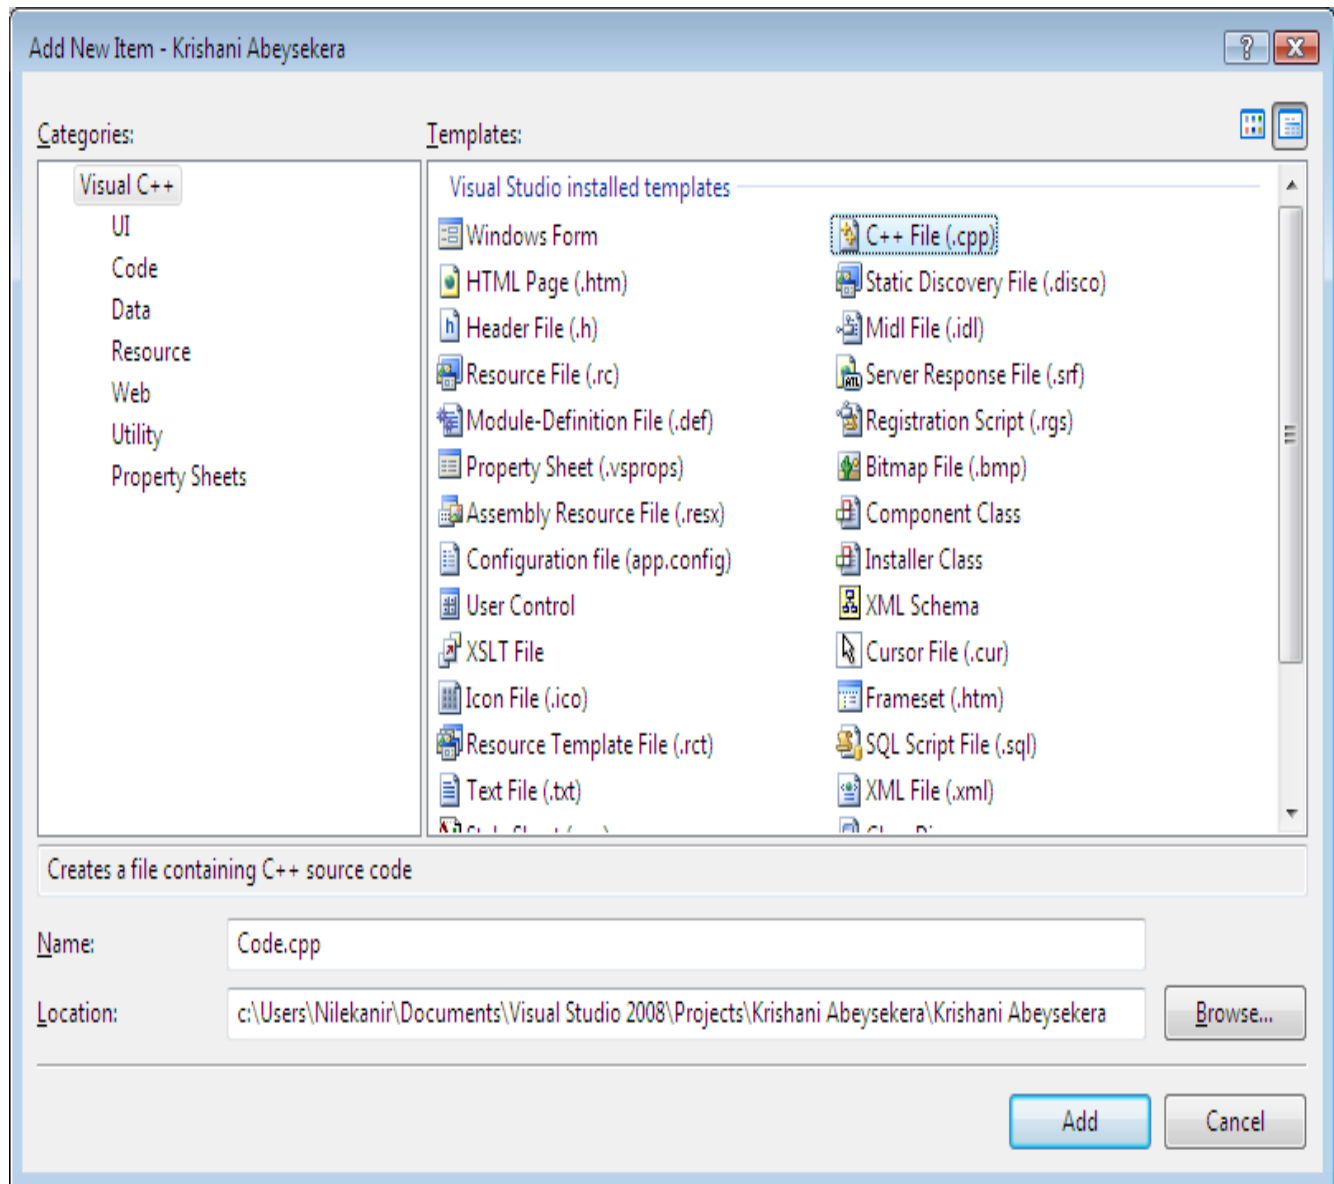

5) Right click on **Source File** and click on **Add**

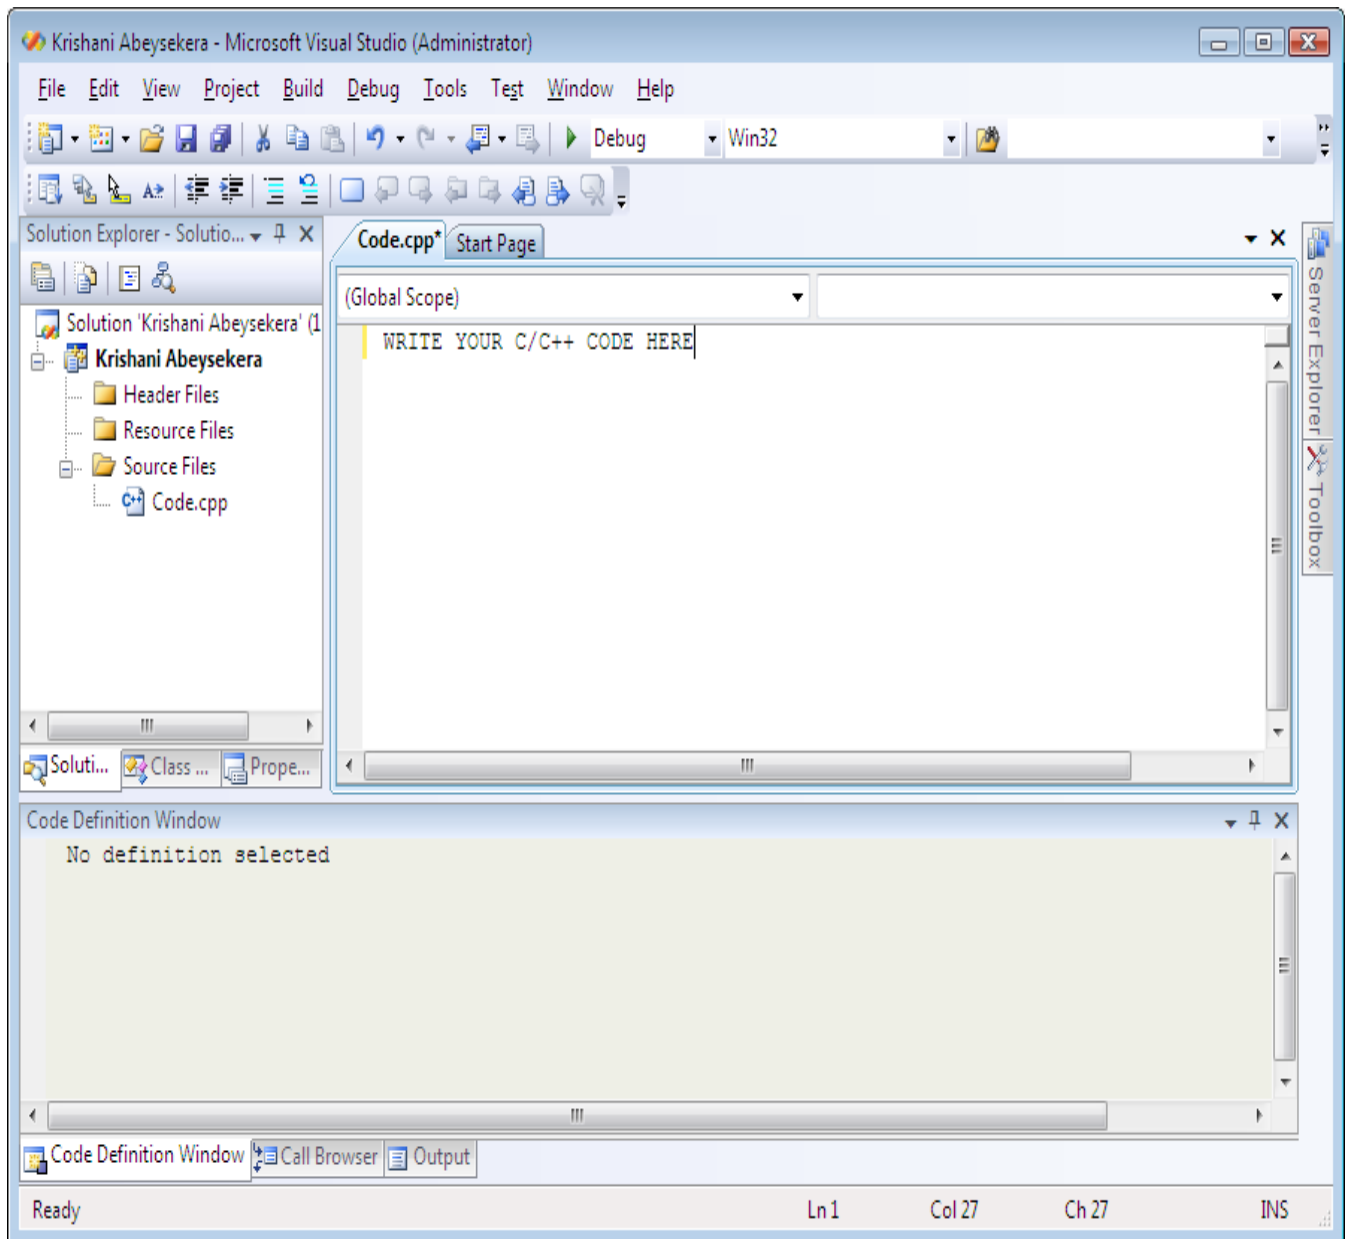

Select C++ file (**.cpp**)

Enter name

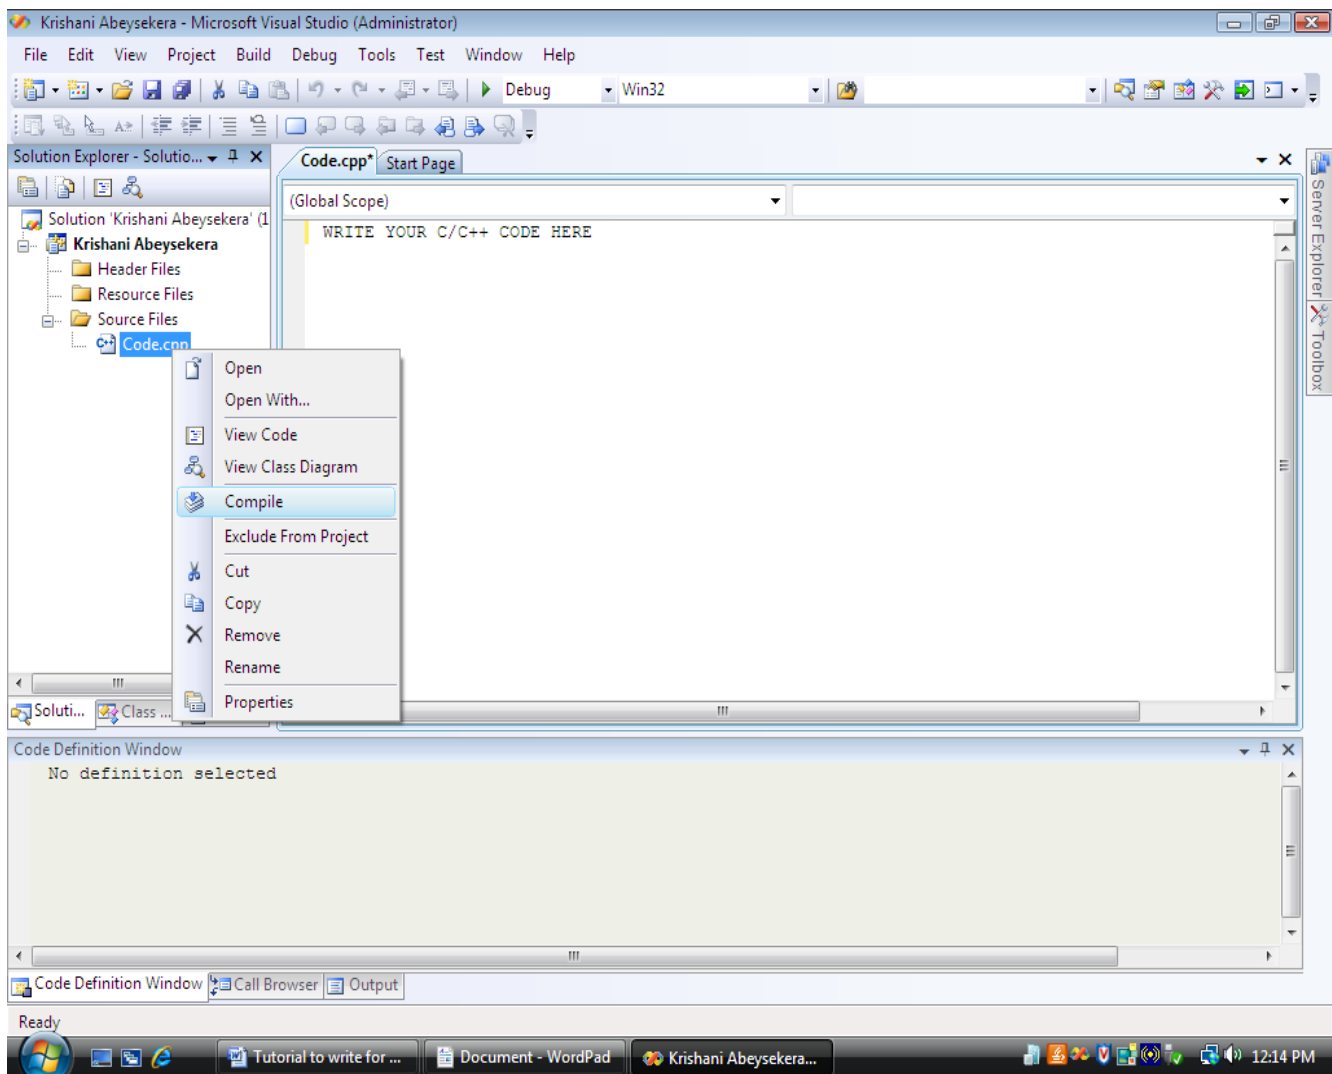

6) Write your Code (as shown in the snapshot)

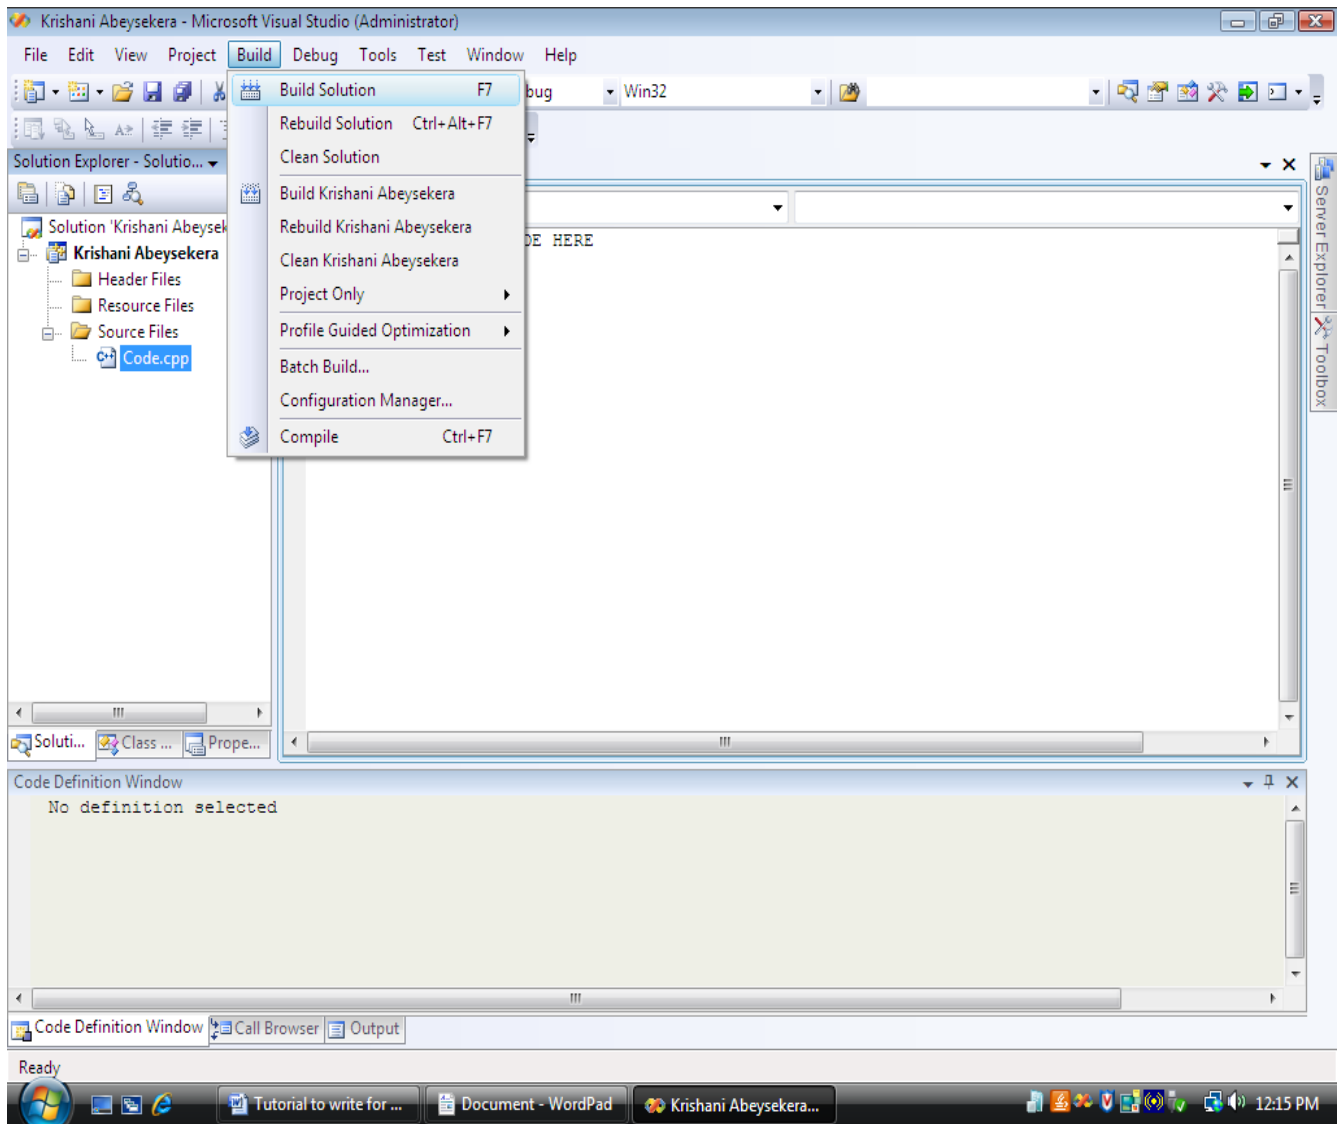

7) Right click on the file name in the Solutions Explorer panel and click on compile.

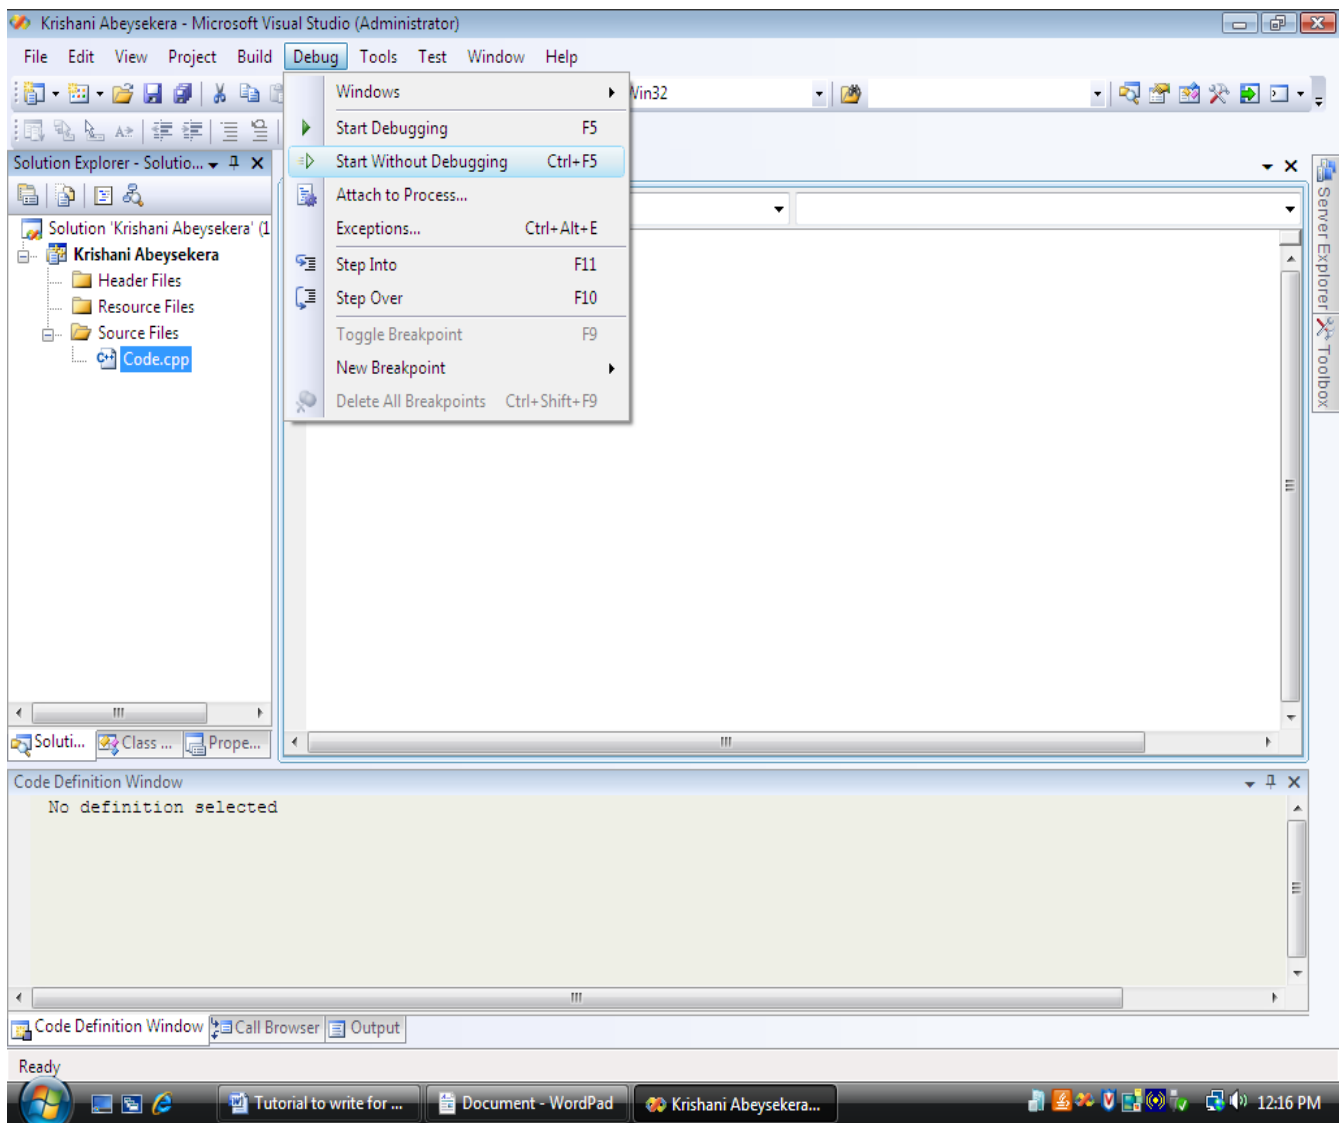

8) Fix program until there are no errors.

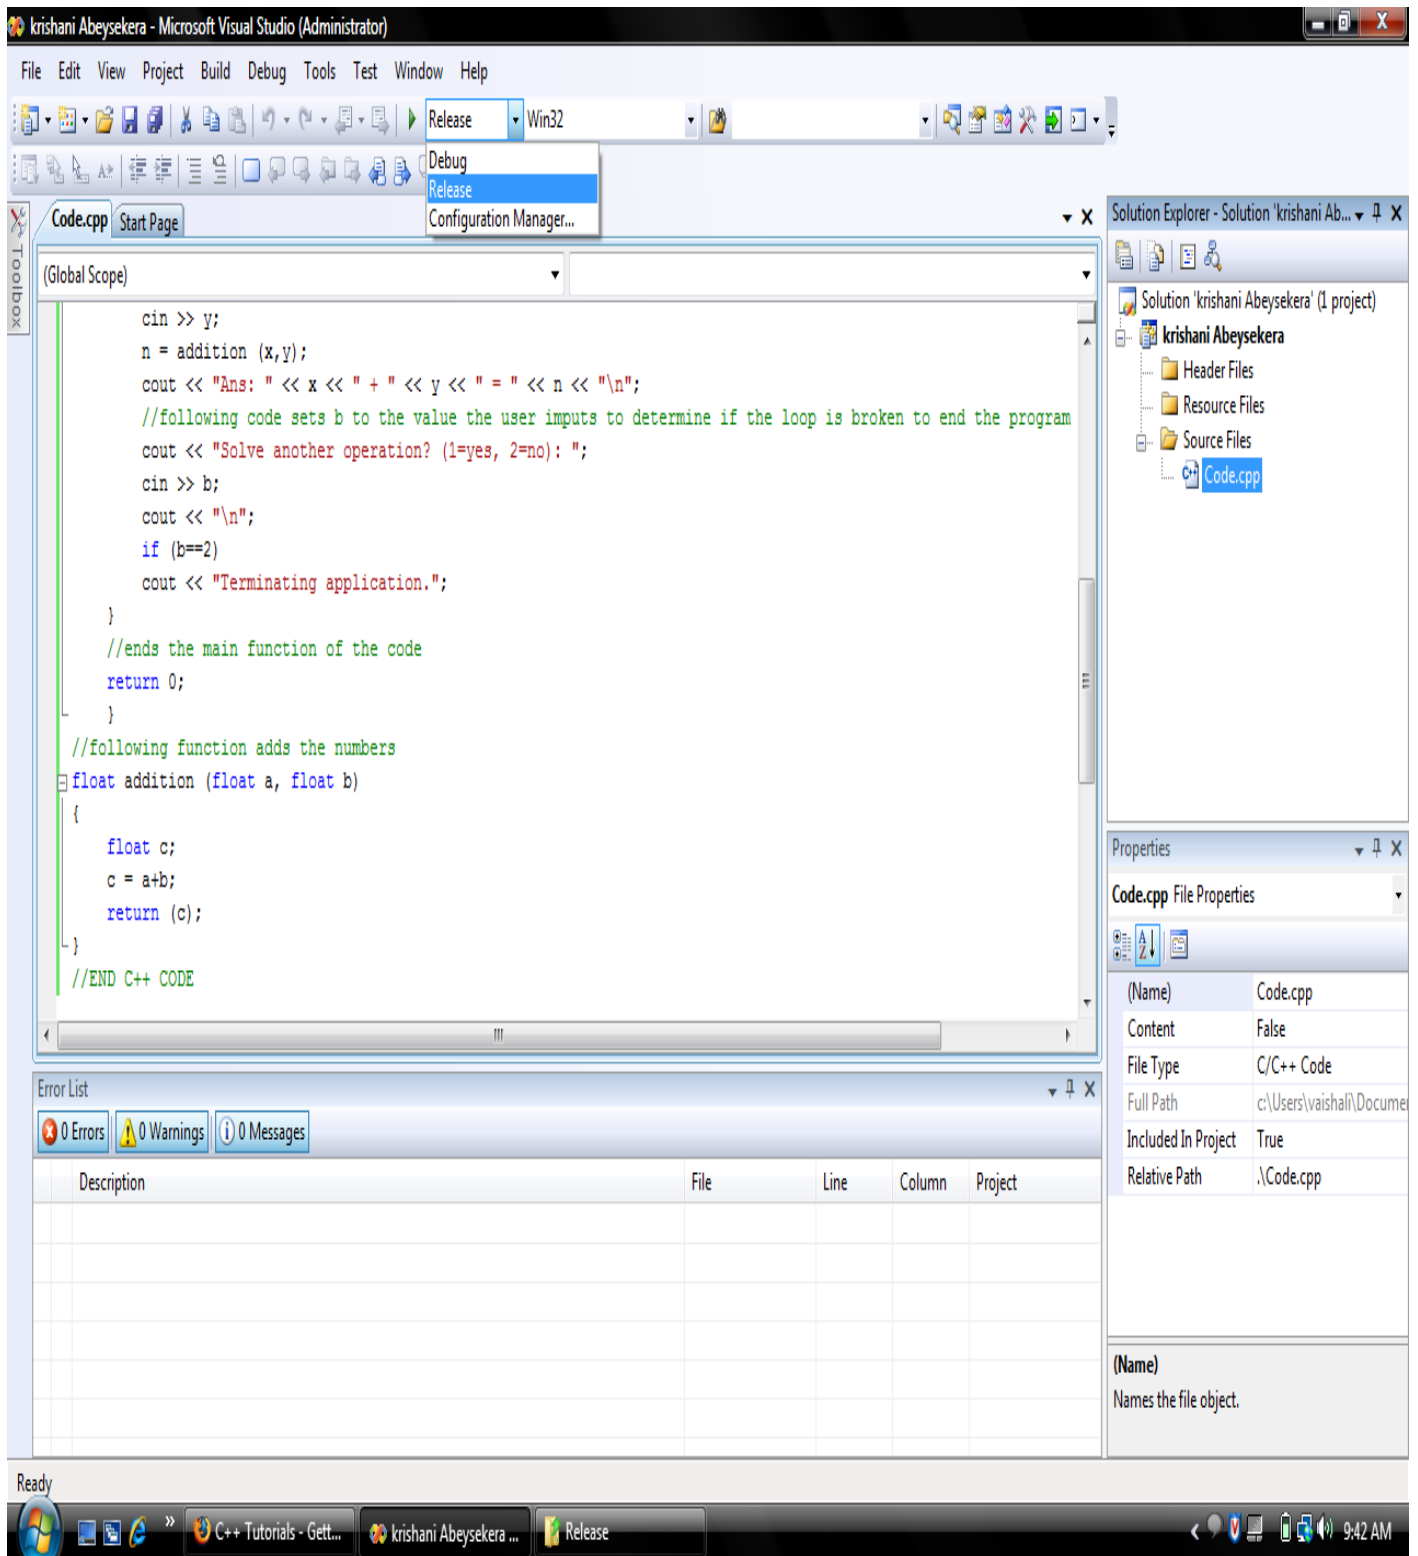

9) Click on the Build menu and select Build Solution

10) Click on the **Debug** menu and select **Start without Debugging** to run the program

11) After you are done completing the project. First go to the drop down menu near the top of the screen which says "**debug**" and change it to "**Release**" in order to save your project as **.exe** (as shown)

12)Go to the Build menu and select "Rebuild".This should give the similar output.

Go to Windows Explorer and go to:

"C:\Documents and Settings\your_username_here\My

Documents\ Visual Studio2008\Projects\Project_name\Release".Double click on the filename.exe(Eg. Code.exe),check if it runs.

You need to hand in this exe file and the source code of your project
